DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the region of catheter comprising a material which permits passage of an antimicrobial agent release from the intervention device from the catheter lumen to an outer surface of the catheter (cls. 6 & 15), the cap is a stopper (cls. 9 & 18) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

The drawings are objected to because the threaded portion of the cap and sidearm is not shown or labeled with a reference numeral (cls. 8 & 17).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended

Art Unit: 3763

replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al. (USPN 6,371,944) in view of Davidson (USPN 5,588,443).

Liu et al. disclose a system for use in the body comprising a catheter 7, a side arm, a lumen through the side arm 9, which communicates with the catheter lumen and

Application/Control Number: 10/690,436 Page 4

Art Unit: 3763

a one-way valve 5 and an intervention device such as the wire 18. Liu et al. however does not teach the wire to be coated with an antimicrobial agent. Davidson discloses a wire for use in the body, which is coated with antimicrobial, anticoagulants or, medicaments as desirable or for reducing adhesion or other adverse cellular or tissue response to surfaces in contact with blood. It would have been obvious to one of ordinary skill in the catheter art at the time the invention was made to modify the wire used to contact with blood of Liu et al. with an antimicrobial coating as taught by Davidson in order to prevent infections within the internal system of the patient.

With respect to claims 5 and 14, it is well known in the surgical and medical arts to prepare/swab a patient with iodine before injecting or surgically introducing a device into a patient. With that knowledge in mind, it would have been obvious to one of ordinary skill to swab/coat a device with lodine as a mere obvious selection of medicament which would prevent infection.

Application/Control Number: 10/690,436 Page 5

Art Unit: 3763

With respect to claims 7-9 and 16-18, Liu et al does not disclose a threaded or stopper cap with the rod affixed to the cap. Fischell et al. disclose a sealing cap 80 for sealing the system to reduce the blood loss when inserting guiding catheters/rods/wires. See figures 1-3 which discloses a stopper cap and figure 7 which disclose a threaded cap. It would have been obvious to one of ordinary skill in the medical art to modify the device of Liu et al. with an end cap for the side arm as taught by Fischell et al. in order to reduce blood loss when inserting the wire into the side arm.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LoAn H. Thanh whose telephone number is (571) 272-4966. The examiner can normally be reached on Mon. - Fri. (First Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick Lucchesi can be reached on (571) 272-4977. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
